

Homework #0 – YouTube Fluid Dynamics
ME5700/6700 Intermediate Fluid Dynamics
Due Monday 8/27/2007

This is a simple assignment to get you excited about fluid dynamics. Go *online* and find a video or flow visualization related to fluid dynamics that you are interested in. Write a one-page memo describing the video and the associated fluid dynamical processes.

Later in the class, you create your own short lecture fluids presentation that you will post on YouTube for others to learn from.

Please do this project in groups of 3-4.

Groups should be prepared to show their video and discuss on Friday August 31.
We will not go through all of them, but be prepared.
